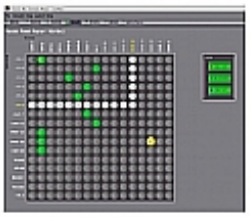
TyLinxPro

Router Control Software



TyLinx Pro is Sierra Video's free router setup and control software, unique in that it has three distinct levels of functionality for different classes of users. With TyLinx Pro, administrators, workflow designers, and end users each have a distinct interface (or "console") tailored to their specific needs. The software allows administrators to create a limitless number of unique profiles for system users, guiding signal routing options on a user−by user basis. An intuitive, graphics−rich interface makes TyLinx Pro incredibly easy to use.

TyLinx Pro supports setup and configuration of multiple outing switchers in a system. The software automatically synchronizes with routing switchers to retrieve their configuration information, including source and destination names. TyLinx Pro programs and fires salvos, performs multi−destination takes and break−away switching, and implements destination locks with optional password protection. The software supports TCP/IP and RS−232 serial control. TyLinx Pro offers advanced system setup features including Mapping, gain control, changeable output slew rates, and input equalization.

FEATURES

- A no-charge download or available from the factory.
- Compatible with Windows® XP SP2, XP Pro x64 SP1, Windows Server® 2003.
- Also compatible with Windows Vista® x86 & x64 editions.
