

K-Config 2

Kramer Configuration Software for SL & RC Room Control Devices

K-Config 2 is an intuitive configuration application that easily maintains control driver libraries, creates room control macros and protocols and automatically generates HTML files where applicable. The new version supports a revised GUI, adds a host of advanced and easy-to-use features and uses a revamped driver database. The common workflow shared between all Kramer control products enables a “Learn once – use forever” approach.

FEATURES

- **Intuitive GUI** - Simple to use graphical user interface design, no programming knowledge required.
- **3d Party Driver Database** - Powerful and updateable by the user.
- **Flexible Querying System** - For projector lamp hours, fan status and similar information.
- **K-Touch Support** - Enables integration with touch-based control devices through the K-Touch system.
- **Windows Compatibility** - Compatible with current windows versions, Windows 7 and Windows 8.
